

Team Meeting Agenda 5/1

- Zero Feature Release
 - Progress update
 - What's left?
 - Website
- Git Issues
- Testing
- Presentation
- Feedback / Open Table for discussion

Notes:

Just got Google Cloud Key, Colleen is attempting to get server connection / response

*** Google cloud difficult to work with. Switching to android data backup for now.

Davis is taking on the automated testing. This is not made for android and will be a headache.

*** requirement change – automated testing no longer required

Will is adding help popup, UI testing

Lawrence, Davis and I worked after the meeting and solved our map api key issues... fix coming

Troy working on help and misc documentation, website

Git.... We will no longer use eGit for anything. We believe this is the source of all of our git issues.

We will meet Friday morning to finalize presentation details

Thoughts: required auto testing is killing time, specs are not clear in areas (Troy will get clarification), documenting unreleased features difficult because they are not even implemented yet. Spending more time changing 10 types of documents than coding.
